

**HURRICANES KATRINA & RITA SURGE INUNDATION and ADVISORY BASE FLOOD ELEVATION MAP**  
**Jefferson Parish, Louisiana**

**Map Number: LA-EE26**

**FEMA**

**Notes:**  
<sup>1</sup> Measured in feet relative to the North American Vertical Datum of 1988.  
<sup>2</sup> Measured in feet relative to the National Geodetic Vertical Datum of 1929 (NGVD29). To convert from NGVD29 to the North American Vertical Datum of 1988 in Jefferson Parish, subtract 0.23 feet.  
<sup>3</sup> Inundation limits estimated from surveyed, surge-only High Water Marks. Local wave effects (wave heights and wave runup) are not included in these elevations.

Date of Events:  
Katrina – August 29, 2005  
Rita – September 24, 2005  
Date of Map: June 5, 2006

**Data Sources:**  
**Aerial Imagery:**  
USDA National Agriculture Imagery Program, 2004

FEMA Flood Insurance Rate Maps (Jefferson Parish, 1995)  
**High Water Marks:**  
FEMA (Identified and surveyed Sept-Dec., 2005)  
**Vertical Control Monuments:**  
National Geodetic Survey  
**Storm Track:**  
NOAA National Weather Service

**HOW TO READ THIS MAP**

In levee-protected areas, the **Advisory Base Flood Elevation (ABFE)** to be used for rebuilding at a particular property is the higher of these two options:

- (1) Current, effective Base Flood Elevation (BFE) shown on the community's Flood Insurance Rate Map (FIRM), or
- (2) 3 feet above Highest Existing Adjacent Grade (HEAG) at the building site. The HEAG is defined as the highest natural elevation of the ground surface prior to construction next to the proposed walls of a structure.

Using the best-available data, FEMA has mapped the areas of the Parish where each of these two options should be applied:

- In green-shaded areas, FEMA recommends that the first floor of the building (including basement) be elevated 3 feet above HEAG at the building site.
- Outside of green-shaded areas, FEMA recommends that the first floor of the building (including basement) be elevated at or above the BFE shown on the community's FIRM. FEMA has provided the current BFEs on the map above in yellow and black text (for example, "**EL 1.5 ft**"). The zone or area where each BFE applies is outlined in yellow; these zone boundaries are the same as those shown on the FIRM. If the FIRM does not have a BFE for a particular area, no elevation will be listed on the map above. In those cases, buildings should be elevated to 3 feet above HEAG.

Anywhere in the Parish, the Community Floodplain Administrator may determine a site-specific ABFE rather than rely on the information mapped above. Using detailed topographic data for the site, the Floodplain Administrator can determine what elevation corresponds with 3 feet above HEAG and compare it to the FIRM BFE. Again, FEMA's guidance is that buildings should be elevated to **whichever of those two elevations is higher at the site.**

For more information on how the ABFE guidance was determined for this Parish, please see: [http://www.fema.gov/pdf/hazard/flood/recoverydata/jefferson\\_parish04-12-06.pdf](http://www.fema.gov/pdf/hazard/flood/recoverydata/jefferson_parish04-12-06.pdf).

**MAPS FOR ADVISORY PURPOSES ONLY - NOT FOR INSURANCE RATING PURPOSES**  
For insurance rating purposes, refer to the currently effective Flood Insurance Rate Map (FIRM), available from your local government or the FEMA Map Service Center (1-800-358-9616/ <http://msc.fema.gov>)
